Eiza Gonzalez vs Miley Cyrus Feud 2013: Liam Hemsworth's Ex-Girlfriend Hints the Mexican Actress Looks Like a Horse After Plastic Surgery Procedure?

Just one day after breaking up with Miley Cyrus, Liam Hemsworth was already spotted moving on fairly quickly with Eiza Gonzalez. The “Wrecking Ball” singer was hurt by the news which caused an alleged feud between her and the Mexican actress.

On October 29, **Hollywood Life** reported that Miley Cyrus posted a picture of herself leaning up against the window of a Halloween costume store, posing with a Democratic donkey. It looks very similar to the photo of Gonzalez dissing Cyrus on October 24 as she flipped off a mannequin in a Miley Cyrus latex bikini from her VMAs performance.

In Cyrus' Twitter picture captioned “#HALLOWEEN a picture is worth a thousand words,” the donkey was displayed wearing a patriotic jacket and a tutu in the window.

While *HollywoodLife* reported that the picture was meant as a diss towards Gonzalez who was spotted making out with Liam Hemsworth just a day after he and Cyrus called off their engagement, the **Examiner** reported that Cyrus is hinting that Gonzalez looks like a donkey.

Gonzalez has already had a significant amount of plastic surgery done such as her nose and allegedly her chin and cheeks through Botox. Cyrus is reportedly using this factor against the Mexican singer and actress, hinting that she looks like a horse.

Gonzalez admitted that she had work done on her nose and while other facial features may have changed due to weight loss, surgeons believe that other changes were made under surgery.

“Her jawline seems less square and wide,” said Dr. Yael Halaas. “This can be achieved by using Botox in the muscle there.”

“It seems that she may have had fillers injected into her cheeks as they are noticeably higher and more pronounced in the recent picture compared to the first,” said Dr. Marina Peredo of Spatique Medical Spa. “Cheek augmentation also makes the whole face appear thinner and longer which is definitely apparent in the after photo.”

“Her upper lids seem more visible which can be achieved by upper lid blepharoplasty,” said Dr. Halaas.

“Another area of question would be her lips. Her lips look a lot fuller now which could mean she may have gotten injections to plumpen them,” added Dr. Peredo

“Although her facial structure looks different and more attractive, most of that seems to be due to ‘growing into her looks,’ along with significant weight loss and professional makeup and hair,” said **Dr. Brian Glatt, a Board Certified Plastic Surgeon in Morristown, NJ**. “She does appear to have had Botox treatments in her forehead and brow. She also may have had some work on her chin (perhaps even at the time of her rhinoplasty, which is a very common combination) as it appears smaller and better defined. She likely had a small chin implant placed.”
